Water Use Efficiency Annual Performance Report - 2020

WS Name: SNOW CREEK

Water System ID# : 01220

WS County: JEFFERSON

Report submitted by: *Samantha Harper*

Meter Installation Information:

Estimate the percentage of metered connections: 100%

If not 100% metered – Did you submit a meter installation plan to DOH? No

Within your meter installation plan, what date did you commit to completing meter installation?

Current status of meter installation:

Production, Authorized Consumption, and Distribution System Leakage Information:

12-Month WUE Reporting Period 01/01/2020 To 12/31/2020

Incomplete or missing data for the year? No

If yes, explain:

Total Water Produced & Purchased (TP) – Annual volume gallons	1,551,370 gallons
Authorized Consumption (AC) – Annual Volume in gallons	1,502,459 gallons
Distribution System Leakage – Annual Volume TP – AC	48,911 gallons
Distribution System Leakage – DSL = $[(TP - AC) / TP] \times 100 \%$	3.2 %
3-year annual average - %	4.1 % 2018, 2019, 2020

Goal-Setting Information:

Enter the date of most recent public forum to establish WUE goal: 09/23/2020

Has goal been changed since last performance report? Yes

Note: Customer goal must be re-established every 6 years through a public process.

Customer WUE Goal (Demand Side):

The one Demand Side Goals established, and approved by the BOC, in the 2020-2025 Water Use Efficiency Program is:

1. Demand Side – Maintain gallons per day per connection at 3-year mean average.

Customer (Demand Side) Goal Progress:

The 2020 customer average consumption of 83 gals/connection/day was below the baseline customer average consumption by 9 gallons per day per connection. Effective January 2020, the PUD BOC approved, by Resolution, a fourth-tier water rate. The customer would reach the fourth-tier rate when consumption exceeds thirty thousand gallons per month. This was intended to aid in the conservation of water.

Additional Information Regarding Supply and Demand Side WUE Efforts

The three Supply Side Goals established, and approved by the BOC, in the 2020-2025 Water Use Efficiency Program are:

1. Supply Side - Maintain distribution systems leak (DSL) percentage at or below 10-percent of system production as calculated on a 3-year average.
2. Supply Side - Water systems not at or below DSL of 10-percent, reduce DSL by 10-percent in the next 3-years (Note: Baseline 3-year average from 2019, 2018 & 2017)
3. Supply Side - Maintain water production at or below the 3-year mean average.

Describe Progress in Reaching Goals:

- Estimate how much water you saved.
- Report progress toward meeting goals within your established timeframe.
- Identify any WUE measures you are currently implementing.
- If you established a goal to maintain a historic level (such as maintaining daily consumption at 65 gallons per person per day for the next two years) you must explain why you are unable to reduce water use below that level.

The PUD produced about 67,000 gallons less in the 2020 3-year average than in the baseline years (2019, 2018 and 2017). Production was likely down due to a highly average summer high demand season when it came to temperatures. Summer temperatures were near average but lower compared to recent years that were hotter than average. Also, the 2020 3-year average for leakage loss was 4-percent less than the 2019 baseline average (2019, 2018 and 2017). The percent leakage continues to easily meet the state leakage/water loss standard of 10% or less. Staff will continue to monitor for leaks and improve infrastructure efficiencies.

The following questions will help DOH better understand water usage, water resources management and drought response. The data will be used to provide technical assistance, not for regulatory purposes.

All questions are voluntary

Month	Date of Measurement	Static Water Level (feet below measuring point)	Dynamic Water Level (feet below measuring point)
January			
February			
March			
April			
May			
June			
July			
August			
September			
October			
November			
December			

Water level data:

Please provide the following information (if known) to help us better utilize the water level data.

Well tag Id number: AEA126

Well depth: 55.0

Water level accuracy (within 0.01 ft < 1 ft ~ 1 ft) 0

Completion type (e.g., cased open interval, cased open-ended, cased open-ended with perforations, etc...) Open Ended Cased

Location coordinates (latitude, longitude) and accuracy of the coordinates (< 1ft, ~1ft, >1000ft) 47° 56' 26" N 122° 53' 07" W

Water level parameter name (e.g. depth below measuring point, depth below top of casing, depth below ground surface) Depth below top of casing

Elevation of top of casing OR elevation of measuring point if different than top of casing (as specified in question 7) 213

Monthly/Seasonal Water Usage:

What was your maximum daily water demand for the previous year (in gallons per day)?

Month	Volume of Water Produced in gallons
January	83,051
February	87,308
March	85,555
April	98,606
May	103,502
June	125,413
July	132,266
August	194,679
September	201,450
October	113,623
November	105,547
December	109,873

Water shortage response:

Did you activate any level of water shortage response plan the previous year?

- Yes No There was no need to

If you activated a water shortage response plan the previous year, what level did you activate? (Check all that apply)

- Advisory Conservation Voluntary Conservation
 Mandatory Conservation Rationing Other

What factors caused your water shortage the previous year?

- Drought Fire Landslides Earthquakes
 Flooding Water Supply Limitations Other

Do not mail, fax, or email this report to DOH
