

**2022 Annual Consumer Confidence Report  
Coyle Water System (ID#367115)**

Contact:	Email	Phone	Email	Title
Bill Graham	bgraham@jeffpud.org	(360) 385-8375	bgraham@jeffpud.org	Resource Manager
Eric Storey	estorey@jeffpud.org	(360) 301-1799	estorey@jeffpud.org	System Operator
Environmental Protection Agency Drinking Water Hotline	-----	1-800-426-4791	-----	-----

Your water source is groundwater from one well. Source 01 is 322 ft deep in a sand and gravel aquifer. The well is located at the intersection of Deer St and Oak St in the community of Coyle. The well uses a variable speed drive to minimize sudden pressure to the water lines to reduce line leaks and breaks. Much of the transmission line has been replaced, however the Coyle water system still has a lot of substandard transmission line requiring replacement. The PUD has incrementally been able to address infrastructure issues while preserving the quality of your drinking water.

Source Number (Well ID)	Susceptibility Rating
SO1 (ACQ526)	Low

**Health Effects**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as person with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

**Water Quality Data**

The table below lists all the drinking water contaminants that were tested for during the 2021 calendar year. While we are required to monitor for certain contaminants, some are tested for less than once per year because certain types of contaminants are deemed unlikely for the system or area. Therefore, for some contaminants, the utility is granted a waiver to test less frequently. Some of the data posted in the report is more than one year old. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. We test for Primary and Secondary Contaminants both regulated and unregulated, as required by the EPA and the Washington State Department of Health. The regulated and unregulated analysis (contaminants) tests are commonly referred to as Inorganic Chemical (IOC), Volatile Organic Chemical (VOC) including Disinfectant Byproducts (DBP) and Synthetic Organic Chemical (SOC) tests which are for herbicides, insecticides or pesticides.

<p><b>The sources of drinking water</b> (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it can dissolve naturally-occurring minerals and, in some cases, radioactive materials, and can pick up substances resulting from the presence of animals or from human activity.</p> <p>Contaminants that may be present in source water include:</p> <ul style="list-style-type: none"> <li>• Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.</li> <li>• Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharge, oil and gas production, mining or farming.</li> </ul>	<ul style="list-style-type: none"> <li>• Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.</li> <li>• Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.</li> <li>• Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.</li> </ul> <p>In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in the water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for human health.</p>
---	---

Definitions:	
<p><b>mg/L:</b> milligrams per liter or parts per million</p>	<p><b>ND:</b> none detected</p>
<p><b>pCi/L:</b> Pico curies per liter, measure of radioactivity</p>	<p><b>Maximum Contaminant Level (MCL):</b> The highest level of a contaminant allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available technology.</p>
<p><b>ppm:</b> parts per million or milligrams per liter.</p>	<p><b>Maximum Contaminant Level Goal (MCLG):</b> The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.</p>
<p><b>MFL:</b> million fibers per liter, a measure of asbestos concentration in water.</p>	<p><b>Action Level (AL):</b> The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.</p>
<p><b>Presence/Absence:</b> Indicates positive/negative test for bacteria.</p>	<p><b>Treatment Technique (TT):</b> A required process intended to reduce the level of a contaminant in drinking water.</p>
<p><b>SO:</b> Source number listed with WA Dept of Health</p>	
<p><b>NP:</b> Not present</p>	
<p><b>NA:</b> Not applicable</p>	

**Required Testing and the last testing date:**

Testing Type	Last Date Tested
Total Coliform Bacteria	Monthly
Nitrate	Annual
Inorganic Contaminants	2013
Volatile Organic Contaminants	2020
Disinfectant Byproducts	2019
Radionuclide	2016
Lead & Copper	2020
Synthetic Organic Compounds (Herbicides, Insecticides, Pesticides)	2014 (Herb, Insect and Pest)

All PUD water system water quality data for sources and distribution can be found at the Washington State Department of Health Sentry Internet website at <https://fortress.wa.gov/doh/eh/portal/odw/si/>. Search for “Coyle”.

Primary Contaminants (Regulated)	MCLG	MCL	Your Water Results	Sample Date	Violation (Y/N)	Typical Sources
Total Coliform Bacteria (Distribution)	Absence	Presence	Absence	Once monthly	N	Naturally present in the environment
Nitrate (mg/L)	N/A	10	ND	12/9/2021	N	Runoff from fertilizer use; leaking from septic tanks, sewage; erosion of natural deposits
Asbestos (MFL)	7 MFL	7 MFL	ND	10/3/2018	N	Decay of asbestos concrete cement in water mains; erosion of natural deposits.
Lead and Copper (Taken at Customer's Tap)	MCLG	AL	Home Results	Sample Date	Violation (Y/N)	Typical Sources
Lead (ppb)	Zero	15	5 homes, all 5 tested ND	7/30/2020	N	Corrosion of plumbing and pipes.
Copper (ppm)	1.3	1.3	5 homes, 4 tested ND, one tested 0.11 mg/l	7/30/2020	N	Corrosion of plumbing and pipes.
Disinfectant Byproducts	MCLG	MCL	Your Water Results	Sample Date	Violation (Y/N)	Typical Sources
Total Trihalomethane (ppb)	N/A	80	1.52	7/15/2020	N	By-product of disinfection/chlorination
Haloacetic Acids (ppb)	N/A	60	ND	7/15/2020	N	By-product of disinfection/chlorination

Secondary Contaminants (Unregulated)	MCLG	MCL	Your Water Results	Sample Date	Violation (Y/N)	Typical Sources
Chloride (mg/L)	250 mg/L	250 mg/L	ND	7/22/2021	N	Seawater intrusion, erosion of natural deposits
